```
height = [0,1,0,2,1,0,1,3,2,1,2,1]
```

first we need to workout the condition of storing
water.

(i) \rightarrow there must be a mismatch/gap in bars.

$$a_1 = [1, 1, 1, 1, 1, 1, 1] \rightarrow$$

(ii) that gap. must be covered from either side.
not wound.

Ans: $(5, 1, 2, 3, 4, 5)$
 $(5, 4, 3, 2, 1)$

on: $\text{dim} = 1$ (add back right sep)

how much water can be trapped at i^{th} index

$$\text{water at } i^{th} \text{ index} = \min(\text{left_max}, \text{right_max}) - \text{arr}[i]$$

↓

$1 - 0 = 1$

$$\frac{\min(2, 4) - 1}{2 - 1} = 1$$

$$(2) - 1$$

$$\text{water at } [4 \rightarrow 5] = \min(2, 3) - \text{arr}[4]$$

↓

0

$$2 - 0 = 2$$

→ (4) units water

$$\text{water} = 1 + 3 + 4$$

$$\text{water} += \min(2, 3) - \text{arr}[2] = 0$$

2, 3 - 2 = 0

water

$$\begin{aligned}
 2, 3 - 0 &= 2 \\
 2, 3 - 1 &= 1 \\
 2, 3 - 2 &= 0 \\
 2, 3 - 3 &= -1
 \end{aligned}$$

2, 3 - 3 → dis card

left support =

right support =

→	6	0	1	1	2	2	2	2	3	3	3	3	3
		0	1	2	3	4	5	6	7	8	9	10	11
→	15	3	3	3	3	3	3	3	3	2	2	2	0

for (int i = 0; i < n; i++)
 water += min(ls[i], rs[i]) - arr[i];
 0, 3 - 0 = 0.
